**TCGRx Partnership with Swisslog Expands Options
to Enhance Patient Safety and Hospital Staff Productivity**

*Agreement Facilitates Cross-Promotion of High-Speed Tablet Packaging
with Pharmacy Automation and Material Transportation*

Powers Lake, Wis., March 11, 2009 – TCGRx (TCG), one of North America's leading providers of pharmacy optimization solutions across multiple markets, today announced an agreement with Swisslog to cross-promote the companies' medication management and material transport products and services for the hospital setting.

The alliance between TCG and Swisslog reflects the growing trend of hospitals instituting bedside scanning as a means to improve patient safety, pharmacy efficiency and nursing staff productivity. Through the agreement with Swisslog, a global leader in logistics automation for healthcare markets, TCG's ATP-Series automatic tablet packager will now be offered to hospitals as a component of Swisslog's automated medication management solutions.

The ATP System is an innovative and versatile Automated Packaging Solution that offers easy filling and refilling of medications with high-speed dispensing, accurate labeling of medication pouches, flexible printing package sizes and bar-code capabilities. The ATP packager can be interfaced with the pharmacy information system for automatic replenishment of unit-based cabinets, patient carts, or nurse servers. One compact unit is configurable from 128 to 384 canisters to accommodate the needs of large and small hospitals. Swisslog will also offer TCG's compact tabletop packager, capable of holding up to 71 fully automated canisters with a manual feeder for the additional medications. Both packagers have a high dispensing speed of up to 60 bags per minute.

"TCG and Swisslog share a strategic vision for helping hospitals improve patient safety while simultaneously reducing expenses, and this alliance will allow both companies to offer a wider range of services to the hospital market," said TCG CEO Duane Chudy. "Swisslog's BoxPicker, a high-density automated medication storage and retrieval system, is a perfect fit with our ATP-Series packaging technology. Our full product portfolios supplement each other in the production, storage and dispensing of medications to hospital patients."

"The ATP-320 has helped us enhance safety in pharmacy and dramatically reduce restocking errors, with the end result being improved patient safety," said Melanie Barr, drug distribution supervisor at Quinte Health Care, a 324-bed, four-hospital system in Ontario, Canada that partnered with TCG in January 2008. "As we transition to bedside medication verification, we need to move forward with bar coding. The machine is running wonderfully and is very user friendly. It allows us to manage all of our packaging and drug distribution from our headquarters, then ship medications to our other three sites."

About TCGRx

TCGRx (TCG) offers pharmacy optimization solutions across space, labor, and inventory. TCG looks at all facets of the pharmacy to bring a total solution that addresses today's needs while leaving options open for the future. TCG's design team creates approaches that mesh seamlessly with its customers' workflow and eliminates the chaos that typically ensues when a pharmacy is reconfigured.

Some of the industry's most experienced professionals founded TCG to deliver products and services that improve patient safety and enhance pharmacy efficiency. TCG offers unsurpassed 24/7 customer service, one of the best manufacturer warranties available and one of the most competitive after-warranty service programs on the market. TCG offers various levels of training at customer institutions or at the company's headquarters in Powers Lake, Wis. For more information visit, www.tcgrx.com.

About Swisslog

Swisslog is a global provider of integrated logistics solutions for warehouses, distribution centers and hospitals.
